What is Docker?

- Open source project and company

- Used to create containers for software applications
- Package Once Deploy Anywhere (PODA)

Advantages of Containers

- Immutability
- Reproducibility
- Isolation
- Faster deployments
- Portability - “it works on my machine”
- Snapshotting
- Security sandbox
- Limit resource usage
- Simplified dependency
- Sharing

Build

Develop an app using Docker containers with any language and any toolchain.

Ship

Ship the “Dockerized” app and dependencies anywhere - to QA, teammates, or the cloud - without breaking anything.

Run

Scale to 1000s of nodes, move between data centers and clouds, update with zero downtime and more.

Build

Develop an app using Docker containers with
any language and any toolchain.

- Image defined in text-based **Dockerfile**
- List of commands to build the image

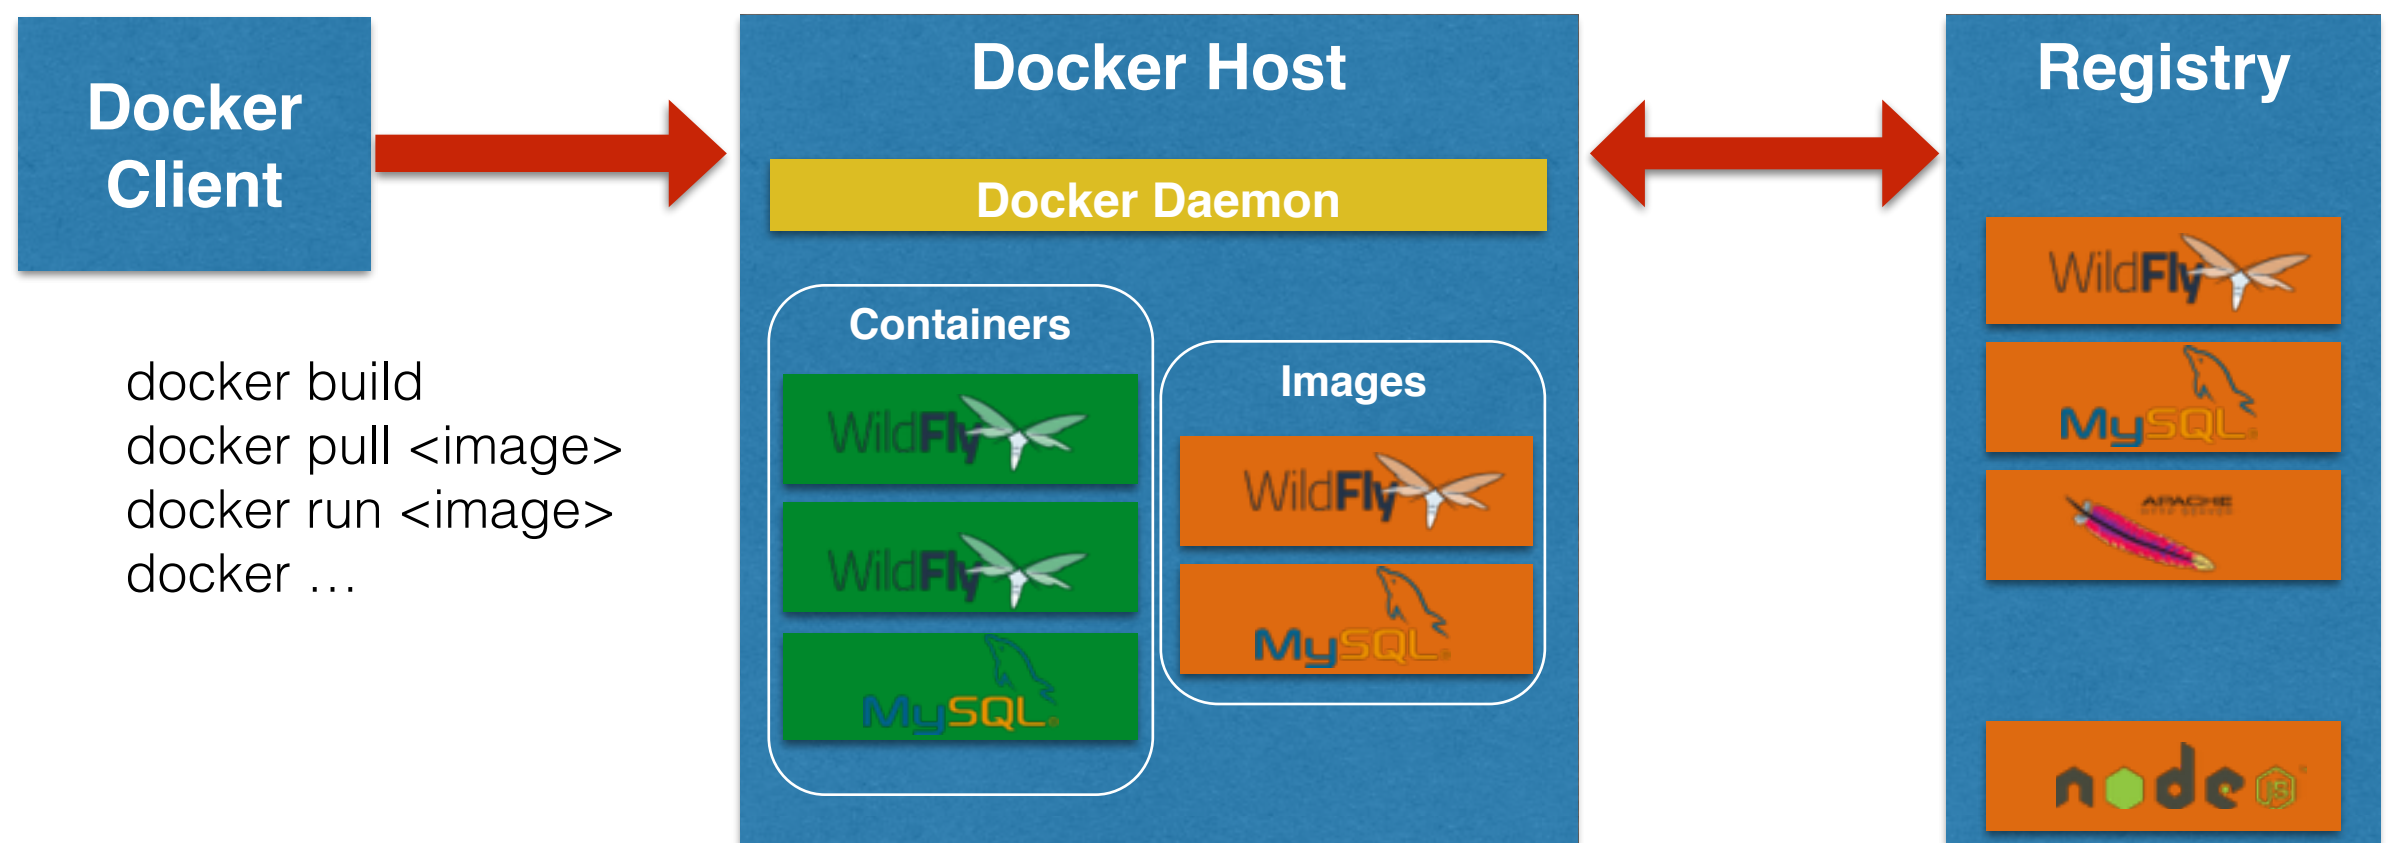

```
FROM fedora:latest
```

```
CMD echo "Hello world"
```

```
FROM jboss/wildfly
```

```
RUN curl -L https://github.com/javaee-samples/javaee7-hol/raw/master/solution/  
movieplex7-1.0-SNAPSHOT.war -o /opt/jboss/wildfly/standalone/deployments/  
movieplex7-1.0-SNAPSHOT.war
```

Docker Workflow

jboss/wildfly

jboss/base-jdk:8

jboss/base

centos:7

Docker Machine

- Create Docker Host on computer or cloud provider

```
docker-machine create --driver=virtualbox  
myhost
```

- Configure Docker client to talk to host
 - Create and pull images
 - Start, stop, restart containers
 - Upgrade Docker
- Not recommended for production yet

Docker Machine Providers

Microsoft Azure

SOFTLAYER®

Docker Compose

- Defining and running multi-container applications
- Configuration defined in a single file
- Great for dev, staging, and CI
- Not recommended for production yet

docker-compose.yml

mysql**db:**

image: mysql

environment:

MYSQL_DATABASE: sample

MYSQL_USER: mysql

MYSQL_PASSWORD: mysql

MYSQL_ROOT_PASSWORD: supersecret

Couchbase Cluster using Docker Compose

```
1 couchbase1:
2   image: couchbase/server
3   volumes:
4     - ~/couchbase/node1:/opt/couchbase/var
5 couchbase2:
6   image: couchbase/server
7   volumes:
8     - ~/couchbase/node2:/opt/couchbase/var
9 couchbase3:
10  image: couchbase/server
11  volumes:
12    - ~/couchbase/node3:/opt/couchbase/var
13  ports:
14    - 8091:8091
15    - 8092:8092
16    - 8093:8093
17    - 11210:11210
```

Docker Swarm

- Native clustering for Docker
- Provides a unified interface to a pool of Docker hosts
- Fully integrated with Machine
- Serves the standard Docker API
- Partially integrated with Compose
- Not recommended for production yet
