What is Docker?

- Open source project and company

- Used to create containers for software applications
- Package Once Deploy Anywhere (PODA)

Build

Develop an app using Docker containers with any language and any toolchain.

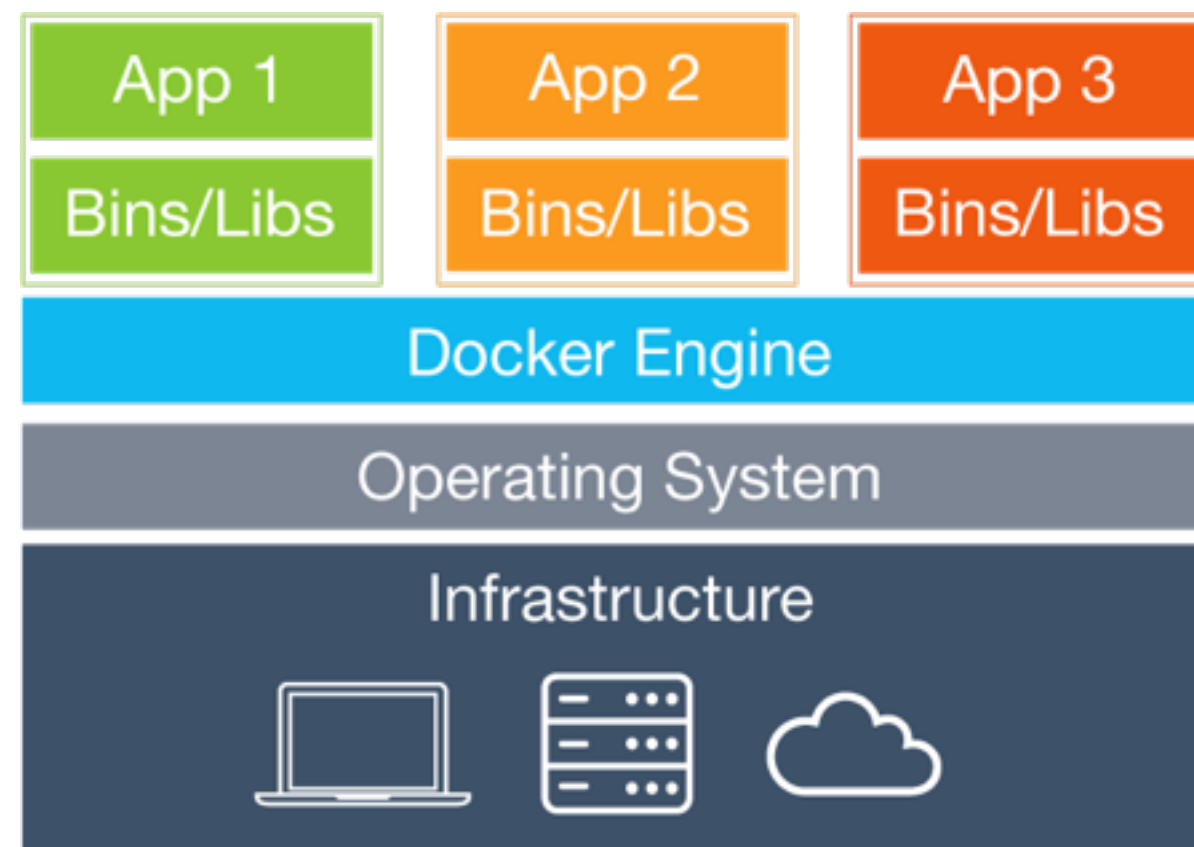

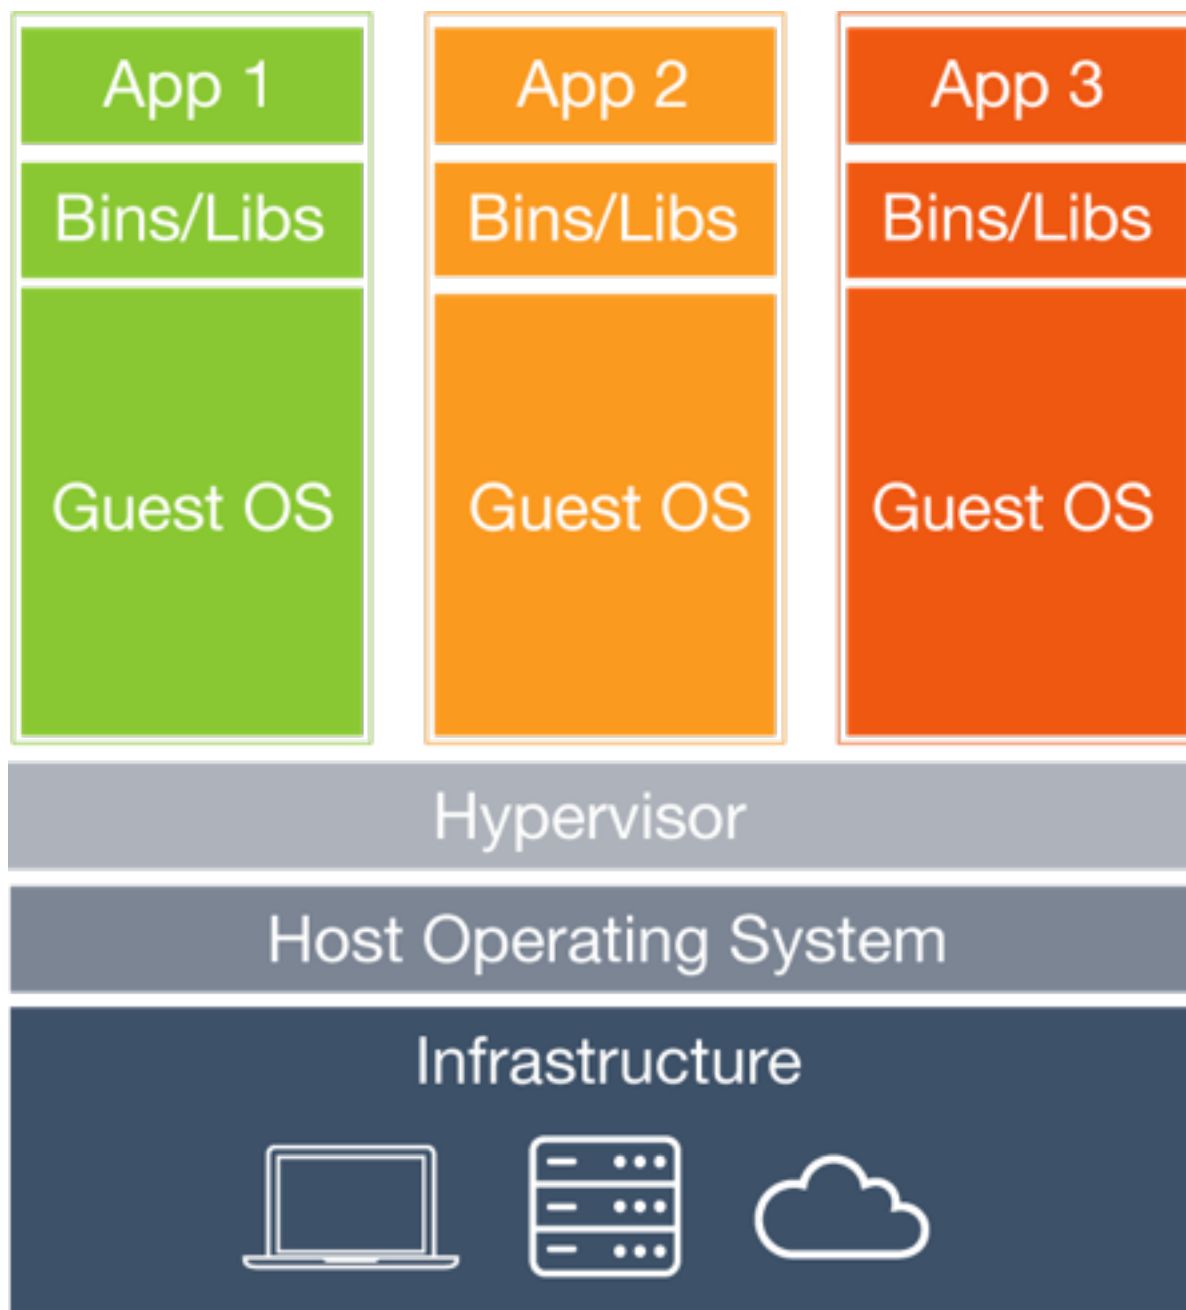

Ship

Ship the “Dockerized” app and dependencies anywhere - to QA, teammates, or the cloud - without breaking anything.

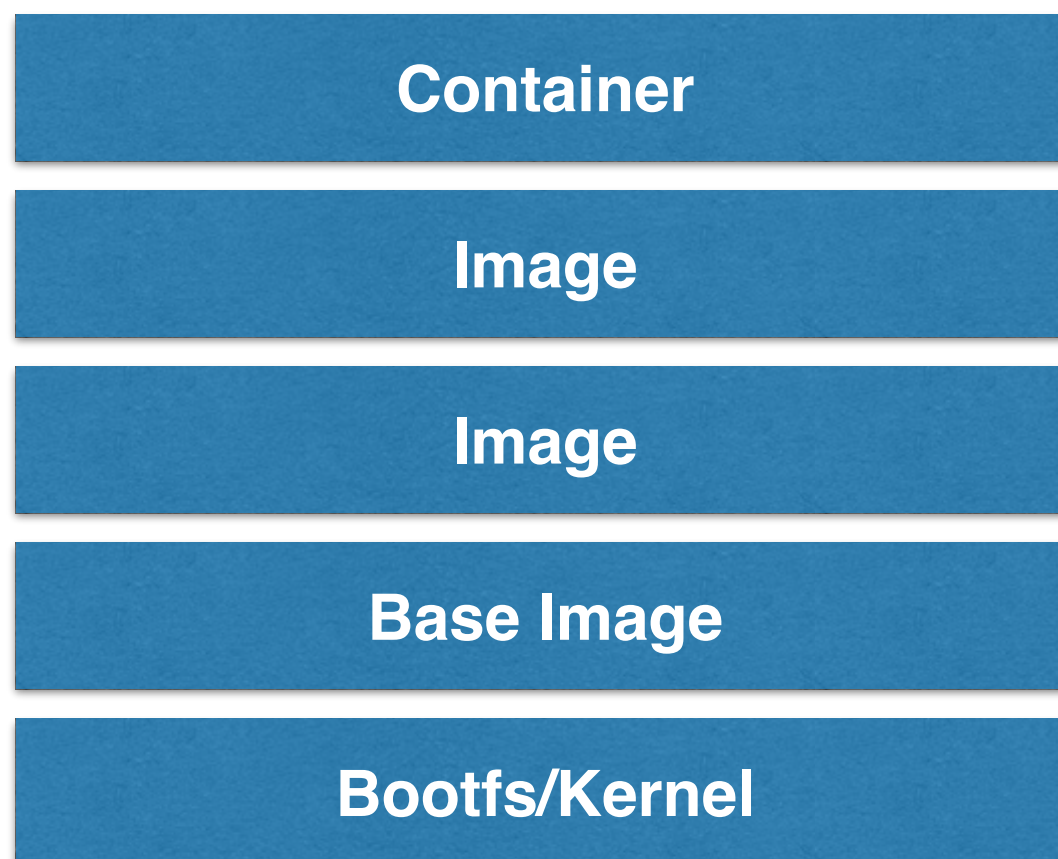

Run

Scale to 1000s of nodes, move between data centers and clouds, update with zero downtime and more.

Docker Workflow

jboss/wildfly

jboss/base-jdk:8

jboss/base

centos:7

Docker Machine

- Create Docker Host on computer or cloud provider

```
docker-machine create --driver=virtualbox  
myhost
```

- Configure Docker client to talk to host
 - Create and pull images
 - Start, stop, restart containers
 - Upgrade Docker
- Not recommended for production yet

Docker Compose

- Defining and running multi-container applications
- Configuration defined in a single file
- Great for dev, staging, and CI
- Not recommended for production yet

docker-compose.yml

mysql**db:**

image: mysql

environment:

MYSQL_DATABASE: sample

MYSQL_USER: mysql

MYSQL_PASSWORD: mysql

MYSQL_ROOT_PASSWORD: supersecret

- **mysql****db:db**

Docker Swarm

- Native clustering for Docker
- Provides a unified interface to a pool of Docker hosts
- Fully integrated with Machine
- Serves the standard Docker API
- Partially integrated with Compose
- Not recommended for production yet
